ConnexPoint Debuts for 2018-2019 School Year, Transforming Payment and Reconciliation Processes

Cloud-based payment platform provides a single-merchant agreement, connects seamlessly to any software provider, consolidates reconciliation in less than 10 minutes, and provides funding within 48 hours

(Minneapolis, MN – July 18, 2018) – Connexeo Inc., a global software and payments provider serving education and community organizations, has introduced [ConnexPoint™](#), an innovative payment platform that improves workflows and provides seamless software integration for schools, community organizations, adult education, and municipalities. ConnexPoint integrates easily to any system requiring payment collection such as food service, athletics, arts, events, child care, or registration, allowing parents and students to complete purchases from one central account. For finance and administration departments, ConnexPoint reduces accounting burdens, shortens and consolidates reconciliation, and increases the speed for funds collected.

“Connexeo's goal is to innovate software technology in our industry and simplify administrative workstreams for our clients. ConnexPoint delivers a cost-effective, simple technology with single-point, single-merchant payment processing and consolidated reconciliation in a cloud-based environment,” said [Charlie Piper](#), Connexeo's Chief Executive Officer. “Organizations of all sizes will benefit from the easy automation that connects all payment channels at one point.”

Schools and community groups typically rely on multiple software systems where payments are made. In most cases, each system employs its own payment processing platform, which can create complex accounting issues, increase time and cost, and multiply the number of steps and potential for error in the reconciliation process needed for each disparate platform. ConnexPoint's ability to provide an easy-to-use and cost-effective payment platform with a single-merchant account is especially important for smaller entities that may not require a fully

integrated, more sophisticated web store format or may not have the internal accounting staff to support multiple, manual reconciliations across platforms.

“Streamlining and automating our accounting function is paramount for every entity, especially schools. We believe a cashless system improves internal controls, speeds reconciliation, and ensures accuracy,” noted Justin Petrone, Account Services Director, Boulder Valley School District, CO. “The ConnexPoint platform debut is perfect timing for our 2018-19 school year.”

With ConnexPoint, schools and community groups of all sizes can:

- Enable a simple, seamless, turnkey API integration to any third-party software where payment transactions are needed.
- Funnel transactions through one merchant account for consolidated reporting and reconciliation, available within 10 minutes and funded within 48 hours.
- Setup and access the self-service payment platform with no startup, integration, minimum, or maintenance fees required.
